

# Usage guide of EasySave

When the app is launched, you are on the main menu. Many functionalities are available. To choose one, you need to input the corresponding number.

## **Function 1, « Choose language »**

You can change the language of the app by entering « fr » for French or « en » for English.

## **Function 2, « Execute the backup »**

It allows you to launch a backup previously defined (by function 3), which will copy all the files from the intended location to another.

Enter the number of the backup to launch a single one, or add a dash (example: “1-3” launches backups 1 to 3), or a semicolon (example: “1;3” launches backups 1 and 3).

## **Function 3, « Create a backup »**

Use this function to create a backup plan.

Enter the name of the backup, then the location of the folder to backup (example: “C:\example” for the folder “example” located on the C disk, on Windows ; “\home\example” for the folder “example” located in the folder “home”, on Linux).

Then, enter the location of the folder where the backup should be performed (where the files will be copied), with the same format as the location of the folder that will be backed up.

## **Function 4, « View active backups »**

List all existing backups and describe their current states.

## **Function 5, « Delete a backup »**

This function allows you to delete a backup, by entering its exact name.

## **Function 6, « Quit »**

Choose this function to close EasySave software.
